

Wall of Art

Contracting & Electromechanical

COMPANY PROFILE

We deliver your electromechanical works with quality and speed

Integrated solutions from design to commissioning and testing

About Us

Your trusted partner in electromechanical works and contracting

Wall of Art began operations in **1439 AH** in Riyadh, with a commercial registration from the Ministry of Commerce, to meet the need for electromechanical works in particular and contracting in general.

We work under the motto “**Quality in execution and speed in delivery**”, through a specialized engineering and technical team and wide relationships with agents and suppliers that ensure supply accuracy, after-sales service and warranty — contributing to Saudi Vision 2030.

Our team comprises qualified engineers and technicians with broad field experience, delivering commercial, residential, industrial and infrastructure projects with full commitment to occupational safety and quality systems.

Saudi Vision 2030

The Kingdom's landmark projects that inspire our ambition

We are proud to be part of the national development journey under Saudi Vision 2030. These are examples of the Kingdom's landmark projects that inspire our ambition for quality and excellence — they belong to their respective owners; we are not their contractors.

Our Values

Our Vision & Mission

Our Vision

To expand our work across all regions of the Kingdom with high quality and efficiency, and to be among the companies contributing to Vision 2030.

Our Mission

To satisfy all our clients by executing works to the highest quality standards and technical specifications, with honest cooperation and commitment to deadlines.

Our credentials & trust factors

UL / FM listed products

Civil Defense compliant

Verified commercial registration

Aligned with Vision 2030

Warranty & after-sales

Our Services

Integrated electromechanical solutions

01

HVAC Systems

Design, supply, installation and commissioning of all AC types: split, central, chillers (air/water-cooled), and air handling units.

02

Fire Fighting & Alarm

Early fire-fighting and alarm systems compliant with Civil Defense, with UL Listed and FM Approved products, and gas suppression (FM200).

03

Electrical & Low-Current

Lighting networks, cabling and panels, CCTV surveillance, access control, communications and low-current systems.

04

Infrastructure Works

Water, sewage and electrical conduits using HDPE and other pipes, coordinated with architectural and structural works.

05

Pump Works

Supply, installation and commissioning of all pump types, and execution of pump rooms and accessories for water and infrastructure projects.

Methodology per service

* HVAC Systems

Design, supply, installation and commissioning of all AC types — split, central and chillers (air/water-cooled) and air handling units.

Key systems

Split

Central

Chillers (air/water)

AHU

FCU

Ducting

1

STAGE 1 Design

We prepare all the plans needed to study and deliver the project — with planning, schedules and cross-department coordination — designing by building type and use, accounting for areas that need a special type of air conditioning.

2

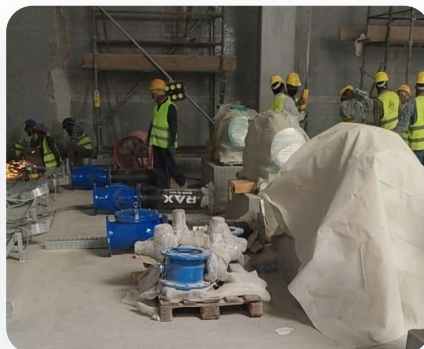

STAGE 2 Supply & Installation

Installations are carried out by specialized technicians under full engineering supervision, and we supply all AC types through our sales department's wide network of suppliers and agents, ensuring supply accuracy, after-sales service and warranty.

3

STAGE 3 Operation & Testing

We inspect every device after installation with professional crews, then test to achieve quality and conformity with specifications and shop drawings, followed by initial and final handover.

Methodology per service

Fire Fighting & Alarm

Early fire-fighting and alarm systems compliant with Civil Defense, using UL Listed and FM Approved products.

Key systems

Sprinkler networks

Hose cabinets

Fire pumps

Smoke/heat detectors

Alarm panels

FM200 suppression

1

STAGE 1 Design

Designing fire-fighting and early-warning systems includes safety layouts based on the facility's nature and use, identifying risks and the preventive and suppression measures needed to keep the facility and its people safe.

2

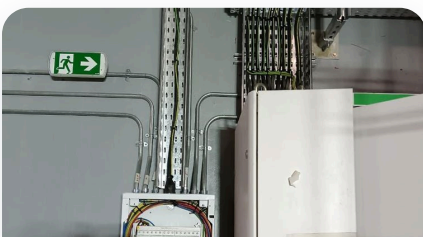

STAGE 2 Supply & Installation

A team of engineers and technicians installs all system components (fire-pipe networks and cabinets, pumps of all kinds, detectors and alarm panels) to standard specs and Civil Defense requirements, with supply via the sales department after owner and engineer approval.

3

STAGE 3 Operation & Testing

We operate and test all installed devices with professional crews, ensuring correct, integrated operation in harmony with other works, then initial and final handover per technical specifications.

Methodology per service

Electrical & Low-Current

Lighting networks, cabling and panels, CCTV, access control, communications and low-current systems.

Key systems

Lighting

Panels

Cabling

CCTV

Access control

Low-current systems

1

STAGE 1 Design

Every project begins with the design stage — preparing all necessary drawings, studying the project and setting schedules — designing by building type and use in full coordination with other departments.

2

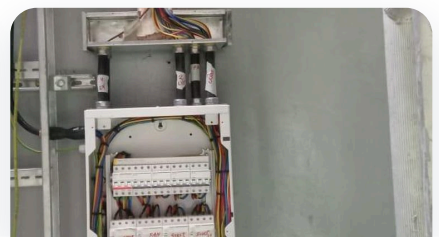

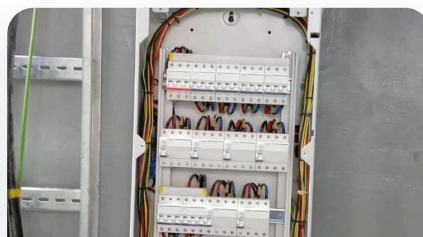

STAGE 2 Supply & Installation

Supply starts with proposing high-quality materials via the sales department after owner and engineer approval; an engineering and technical team then installs all components (lighting units, cables, panels, cameras, sockets and switches, control systems and low-current conduits).

3

STAGE 3 Operation & Testing

Professional crews operate and test all installed devices and equipment, ensuring correct and integrated operation, with initial and final handover per technical specifications.

Methodology per service

Infrastructure & Pumps

Water, sewage and electrical conduits using HDPE and other pipes, plus supply, installation and commissioning of pumps and pump rooms.

Key systems

HDPE piping

Water networks

Sewage

Pump stations

Pump rooms

Electrical conduits

1

STAGE 1 Design

Designing infrastructure layouts requires a thorough study of all in-scope systems (sewage, water, electrical conduits) and coordination with architectural and structural works, with schedules for sequencing and durations.

2

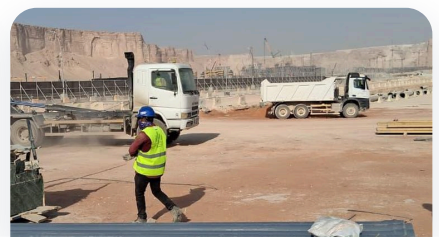

STAGE 2 Supply & Installation

All installations are carried out by specialized technicians under full engineering supervision, and we supply all types of pipes, pumps and accessories through the sales department's close network of suppliers and agents, coordinated with project management.

3

STAGE 3 Operation & Testing

We inspect and test all installed devices and equipment with professional crews, ensuring correct operation, then initial and final handover per the project's technical specifications.

Our Sectors

Sectors we serve with experience and efficiency

Commercial & Office Buildings

Electromechanical works for towers, offices and commercial centers to the highest standards.

Residential Complexes

HVAC, electrical, fire-fighting and pump solutions for villas, compounds and residential units.

Factories & Industrial Facilities

Electrical, mechanical and fire-fighting systems suited to industrial operating environments.

Infrastructure Projects

Water and sewage lines, pump stations and networks for large-scale projects.

Healthcare & Educational Facilities

Precise installations meeting the requirements of hospitals, schools and public facilities.

Government & Semi-Government

Delivering government projects per approved specifications, certifications and schedules.

Our Methodology

1

Design

Preparing all necessary drawings and studying the project by building type and use, with schedules.

2

Supply & Installation

Installations by specialized technicians under engineering supervision, supplying high-quality materials via our network.

3

Commissioning & Testing

Inspecting and testing all devices and systems to ensure quality, then initial and final handover.

Why Us

Quality & speed of delivery

Precise execution within agreed schedules without compromising quality.

Specialized engineering team

Installations by specialized technicians under full engineering supervision.

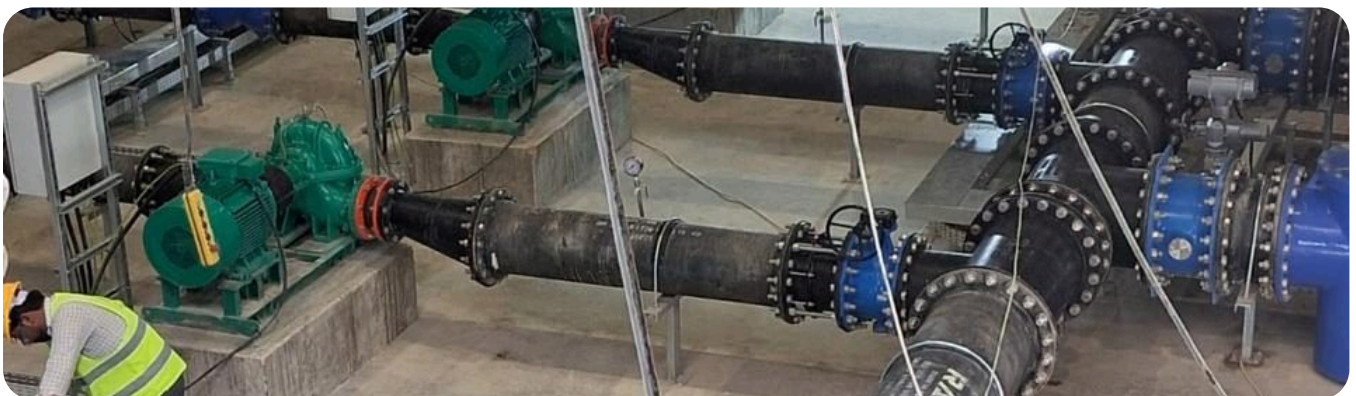

Globally certified products

Fire systems with UL Listed and FM Approved products, Civil Defense compliant.

Strong agent relationships

A wide network ensuring supply timing accuracy, after-sales service and warranty.
